

## YES1 32NA Intelligent Dual Power Automatic Transfer Switch PC-class

### Intelligent Dual Power Automatic Transfer Switch PC-class YES1-32NA

#### **Structure and Characteristics of Intelligent Dual Power Automatic Transfer Switch PC-class:**

YES1 series intelligent automatic dual power automatic transfer switch consists of switch entity and transfer controller. This dual power automatic transfer switch applies electromagnetic drive while the transfer controller adopts a 220 V AC power with a main and a standby power, no additional power to control. Switch entity itself can also use the electric or mechanic off signal as the isolation indicator.

#### **YES1-32NA Dual Power Automatic Transfer Switch (one body two-segment)**

Rated current: 16 A ~ 32A

Poles: 2 P, 3P, 4P

#### **Functions of Automatic Transfer Switch PC-class (YES1-32NA):**

Simultaneously detect two lines power supply of three-phase four-wire grid.

It has several protection functions such as: over-voltage, under-voltage, and lack phase protection.

Integrated ATS, without generators starting functions.

The total height of the switch is only 110 mm with complete functions.

In order to meet user's request, our company introduced an electric automatic switch transfer in which the controller is installed, and just need the user to connect the loop to start it.
